

```

49 //variables
50
51 int marks=55;
52 var teacherName="Faris";
53 bool isPresent = true;
54 double wight= 55.8;
55
56 List techerNum = [
57
58 <String, int?> {
59
60 "tt":null,
61 "bb":11,
62 "kk":99,
63 }
64 ];

```

In this code there are five variables one of them is list and inside the list there is a map and I use the null safety “?” with the **int** so if there is a number or null both will be written.

○ Ask input from user:

- 1/ import dart.io library
- 2/ use Stdin.readLineSync(); function

```

//import "dart.io";
//ask input from user

print ("what is your name" );
String name = Stdin.readLineSync();
print ("your name is =${name}");

```

Then the user now can inter his/her name.
